Current transformers Requirement : The ADR241S relay is self power numerical relay and derived all power required for it internal operation as well as for it CB operation is derived from external CT. The proper operation it necessary to select proper rated CT. When the CT current is at 20% the relay gets activated.

The ADR241A is member of Ashida Numerical Relay family (Aditya Series) design to meet demand of low and medium switchgear control. The ADR241A is a 3 OC and 1 EF relay with Instantaneous high set and programmable output to simplify feeder protection wiring. The ADR241A continuously monitors all phases and earth current, through CT connections.

ASHIDA has designed & manufactured the unique product for protection of Ring Main Units. ADR241S is a self powered relay or dual powered relay. This relay can be used in RMUs where there is no external battery backup available. Whenever the current is not available, ADR241S relay takes power from CT Current for its operation.

The ADR241S relay is Self Power relay, it takes power from CT Current for its operation, after the tripping operation and when no current is available to view the Fault Current in the different Phases of the relay, Relay takes power from Battery. When there is no CT Current Press " BAT ON " Push button to view Fault current.

Offshore Electrical Engineering Manual. Second Edition, is for electrical engineers working on offshore projects who require detailed knowledge of an array of equipment and power distribution systems. The book begins with coverage of different types of insulation, hot-spot temperatures, temperature rise, ambient air temperatures, basis of machine ratings, method of measurement of temperature rise by resistance, measurement of ambient air temperature. This is followed by coverage of AC generators, automatic voltage regulators, AC switchgear transformers, and programmable electronic systems. The emphasis throughout is on practical, ready-to-apply techniques that yield immediate and cost-effective benefits. The majority of the systems covered in the book operate at a nominal voltage of 24 y dc and, although it is not necessary for each of the systems to have separate battery and battery charger systems, the grouping criteria require more detailed discussion. The book also provides information on equipment such as dual chargers and batteries for certain vital systems, switchgear tripping/closing, and engine start batteries which are dedicated to the equipment they supply. In the case of engines which drive fire pumps, duplicate charges and batteries are also required. Packed with charts, tables, and diagrams, this work is intended to be of interest to both technical readers and to general readers. It covers electrical engineering in offshore situations, with much of the information gained in the North Sea. Some topics covered are offshore power requirements, generator selection, process drivers and starting requirements, control and monitoring systems, and cabling and equipment installation Discusses how to perform inspections of electrical and instrument systems on equipment using appropriate regulations and specifications Explains how to ensure electrical systems/components are maintained and production is uninterrupted Demonstrates how to repair, modify, and install electrical instruments ensuring compliance with current regulations and specifications Covers specification, management, and technical evaluation of offshore electrical system design Features evaluation and optimization of electrical system options including DC/AC selection and offshore cabling designs

This book is a printed edition of the Special Issue "Precision Nutrition and Metabolic Syndrome Management" that was published in Nutrients

An up-to-date review of the physiology, pharmacology, and chemistry used to develop drugs to treat pain. Experts cover such topics as the neural pathways involved in pain sensation; traditional and new test systems for potential analgetic agents; current research on oligopeptide enkephalins; and the organic and medicinal chemistry of central analgetics.

This book addresses a range of real-world issues including industrial activity, energy management, education, business and health. Today, technology is a part of virtually every human activity, and is used to support, monitor and manage equipment, facilities, commodities, industry, business, and individuals ' health, among others. As technology evolves, new applications, methods and techniques arise, while at the same time citizens ' expectations from technology continue to grow. In order to meet the nearly insatiable demand for new applications, better performance and higher reliability, trustworthiness, security, and power consumption efficiency, engineers must deliver smart innovations, i.e., must develop the best techniques, technologies and services in a way that respects human beings and the environment. With that goal in mind, the key topics addressed in this book are: smart technologies and artificial intelligence, green energy systems, aerospace engineering/robotics and IT, information security and mobile engineering, IT in bio-medical engineering and smart agronomy, smart marketing, management and tourism policy, technology and education, and hydrogen and fuel-cell energy technologies.

New edition of this major work examining the development of neoliberalism In this established classic, sociologists Luc Boltanski and Eve Chiapello get to the heart of contemporary capitalism. Delving deep into the latest management texts informing the thinking of employers, the authors trace the contours of a new spirit of capitalism. They argue that beginning in the mid-1970s, capitalism abandoned the hierarchical Fordist work structure and developed a new network-based form of organization founded on employee initiative and autonomy in the workplace—a putative freedom bought at the cost of material and psychological security. This was a spirit in tune with the libertarian and romantic currents of the period (as epitomized by dressed-down, cool capitalists such as Bill Gates and Ben and Jerry) and, as the authors argue, a more successful, pernicious, and subtle form of exploitation. In this new edition, the authors reflect on the reception of the book and the debates it has stimulated.

Neurodegenerative diseases, including Alzheimer ' s, Parkinson ' s, Huntington ' s, and amyotrophic lateral sclerosis, are the most common pathologies of the central nervous system currently without a cure. They share common molecular and cellular characteristics, including protein misfolding, mitochondrial dysfunction, glutamate toxicity, dysregulation of calcium homeostasis, oxidative stress, inflammation, and ageing, which contribute to neuronal death. Efforts to treat these diseases are often limited by their multifactorial etiology. Natural products, thanks to their multitarget activities, are considered promising alternatives for the treatment of neurodegeneration. This book deals with two different forms of natural products: extracts and isolated compounds. The study of the bioactivity of the extracts is extremely important as many studies have demonstrated the synergistic effect of the combination of different natural products. On the other hand, the investigation of the activity of specifically isolated natural products can be also important to understand their cellular and molecular mechanisms and to define the specific bioactive components in extracts or foods. This book can be considered an important contribution to knowledge of the neuroprotective effect of natural products and presents a great deal of information, related to both the benefits but also the limitations of their use in counteracting neurodegeneration.

This book constitutes the proceedings of the 17th International Conference on Passive and Active Measurement, PAM 2016, held in Heraklion, Crete, Greece, in March/April 2016. The 30 full papers presented in this volume were carefully reviewed and selected from 93 submissions. They are organized in topical sections named: security and privacy; mobile and cellular; the last mile; testbeds and frameworks; web, DNS and routing; IXP and MPLS; and scheduling and timing.
