The manual describes safety and health requirements for all Corps of Engineers activities and operations, including Naval Facilities Engineering Command (NAVFAC) construction contracts. Following this manual will help all contractors working on DoD projects to meet all of the necessary safety requirements to ensure success on any current and future Federal projects.

EM-385-1-1 manual is vital in getting and maintaining work on government contracts. It includes all safety and health requirements for all Corps of Engineers activities and operations, including Naval Facilities Engineering Command (NAVFAC) construction and Department of Defense projects.

This manual provides guidance on evaluating the condition of the concrete in a structure, relating the condition of the concrete to the underlying cause or causes of that condition, selecting an appropriate repair material and method for any deficiency found, and using the selected materials and methods to repair or rehabilitate the structure. Guidance is also included on maintenance of concrete and on preparation of concrete investigation reports for repair and rehabilitation projects. Considerations for certain specialized types of rehabilitation projects are also given.

Provides guidance for the safe design and economical construction of retaining walls and inland and coastal flood walls. This manual considers the retaining walls subjected to hydraulic loadings, such as flowing water, submergence, and wave action. It also discusses issues, such as design considerations, forces, and foundation analysis.

AR 420-1 Published 1 June 2018 Army Facilities Engineering Regulation 420-1, Army Facilities Management (24 August 2012) describes the management of public works activities, housing, and other facilities operations and management, military construction program development and execution, master planning, utilities services and energy management, and fire and emergency services. Also, it identifies and synthesizes other regulations that provide detailed facilities management policy. This regulation applies to the Active Army, the Army National Guard/Army National Guard of the United States, and the U.S. Army Reserve. This book is a terrific source for sound, cost-effective energy management and investment practices to enhance the DoD's energy security and environmental stewardship. Depending on the military installation location, well-planned energy and water use savings can represent thousands to hundreds-of thousands dollars each year, and many can be achieved with minimal cash outlays. Why buy a book you can download for free? We print this book so you don't have to. First you gotta find a good clean (legible) copy and make sure it's the latest version (not always easy). Some documents found on the web are missing some pages or the image quality is so poor, they are difficult to read. We look over each document carefully and replace poor quality images by going back to the original source document. We proof each document to make sure it's all there - including all changes. If you find a good copy, you could print it using a network printer you share with 100 other people (typically its either out of paper or toner). If it's just a 10-page document, no problem, but if it's 250-pages, you will need to punch 3 holes in all those pages and put it in a 3-ring binder. Takes at least an hour. It's much more cost-effective to just order the latest version from Amazon.com This book includes original commentary which is in the public domain. We print these large documents as a service so you don't have to. The books are compact, tightly-bound, full-size (8 1/2 by 11 inches), with large text and glossy covers. 4th Watch Publishing Co. is a SDVOSB. If you like the service we provide, please leave positive review on Amazon.com.

Comprehensive Civil Engineering Coverage You Can Trust The Civil Engineering Reference Manual is the most comprehensive textbook for the NCEES Civil PE exam. Provides technical criteria and guidance for the design of rock foundations for civil works or other similar large military structures. This manual offers a minimal standard to be used in planning a satisfactory rock foundation design under normal conditions.

The Manual of Tests and Criteria contains criteria, test methods and procedures to be used for classification of dangerous goods according to the provisions of Parts 2 and 3 of the United Nations Recommendations on the Transport of Dangerous Goods, Model Regulations, as well as of chemicals presenting physical hazards according to the Globally Harmonized System of Classification and Labelling of Chemicals (GHS). As a consequence, it supplements also national or international regulations which are derived from the United Nations Recommendations on the Transport of Dangerous Goods or the GHS. At its ninth session (7 December 2018), the Committee adopted a set of amendments to the sixth revised edition of the Manual as amended by Amendment 1. This seventh revised edition takes account of these amendments. In addition, noting that the work to facilitate the use of the Manual in the context of the GHS had been completed, the Committee considered that the reference to the "Recommendations on the Transport of Dangerous Goods" in the title of the Manual was no longer appropriate, and decided that from now on, the Manual should be entitled "Manual of Tests and Criteria".
