What caused the ice ages? Tiny ocean fossils offer key ...

In the 1970s, scientists discovered that the concentration of the atmospheric greenhouse gas carbon dioxide (CO₂) was about 30% lower during the ice ages. That prompted theories that the decrease in atmospheric CO₂ levels is a key ingredient in the glacial cycles, but the causes of the CO₂ change remained unknown. Some data suggested that, during ice ages, CO₂ was trapped in the deep ocean ...

Human evolution - The fossil evidence | Britannica

The fossil record provides credible evidence for macroevolutionary change and common descent. It provides direct evidence for major sequential changes in the Earth ' s biota through transitional forms. Fossil data is essential for a fuller understanding of the rates and patterns of phenotypic change within and among many clades (Polly, 2001).
