# Get Free Genetics Module B Anchor 3 Answer Key

parental generation to the next. - During gamete formation, the alleles for each gene segregate from each other so that each gamete carries only one allele for each gene. - Punnett squares use mathematical probability to help predict the genotype and phenotype combinations in genetic crosses.

**Genetics - Colonial School District**  
Genetics Module B, Anchor 3. STUDY. PLAY. Different forms of a gene are called alleles. Organisms that have two identical alleles for a particular trait are said to be homozygous. What is the difference between a dominant and recessive allele? A dominant allele shows whenever it is present. A recessive allele shows only if no dominant alleles ...
