East Asia is a region that holds much fascination for many people. It is one of the world's most dynamic and diverse regions and is also becoming an increasingly coherent region through the inter-play of various integrative economic, political and socio-cultural processes. Such a development is generally referred to as 'regionalism', which itself has become a defining feature of the contemporary international system, and this book explores the various ways in which East Asian regionalism continues to deepen. Focusing on the main themes of the East Asia region and the study of regionalism, economic regionalism and East Asia's new economic geography, Southeast Asia and the Association of Southeast Asian Nations (ASEAN), trans-regionalism, East Asia's new free trade agreement trends and key transnational issues in East Asia such as international migration and energy security, East Asian Regionalism will be an essential text for courses on East Asian regionalism, Asian politics and Asian economics. Key pedagogical features include: end of chapter 'study questions' case studies that discuss topical issues with study questions also provided useful tables and figures which illustrate key regional trends in East Asia extensive summary conclusions covering the chapter's main findings from different international political economy perspectives.

Companies are forever being more creative in their branding strategies, building identities ranging from the warm-and-fuzzy to the ultra-cool and edgy. But it seems that many of these enterprises forgot that a brand, at its heart, is a promise to deliver. If the brand experience does not live up to that promise, customers will take their business elsewhere. Brand Real is a business strategy guide for making a brand's promise stand up at every customer touch point. Packed with proven, repeatable management practices, the book shows how to establish a clean brand architecture while avoiding the needless complexity that has tripped up many promising companies. Author Laurence Vincent presents cautionary tales of supposed brand superstars as well as instructive case studies of genuine brand giants like American Express, Apple, Cisco, Google, Qualcomm, Virgin, and others. Readers will learn how to connect the outward-facing elements of their brands—logos, advertising, imagery, communications—directly to the core elements of business strategy and forge a powerful and lasting connection with their customers.

Various combinations of commercially available technologies could greatly reduce fuel consumption in passenger cars, sport-utility vehicles, minivans, and other light-duty vehicles without compromising vehicle performance or safety. Assessment of Technologies for Improving Light Duty Vehicle Fuel Economy estimates the potential fuel savings and costs to consumers of available technology combinations for three types of engines: spark-ignition gasoline, compression-ignition diesel, and hybrid. According to its estimates, adopting the full combination of improved technologies in medium and large cars and pickup trucks with spark-ignition engines could reduce fuel consumption by 29 percent at an additional cost of \$2,200 to the consumer. Replacing spark-ignition engines with diesel engines and components would yield fuel savings of about 37 percent at an added cost of approximately \$5,900 per vehicle, and replacing spark-ignition engines with hybrid engines and components would reduce fuel consumption by 43 percent at an increase of \$6,000 per vehicle. The book focuses on fuel consumption--the amount of fuel consumed in a given driving distance--because energy savings are directly related to the amount of fuel used. In contrast, fuel economy measures how far a vehicle will travel with a gallon of fuel. Because fuel consumption data indicate money saved on fuel purchases and reductions in carbon dioxide emissions, the book finds that vehicle stickers should provide consumers with fuel consumption data in addition to fuel economy information.
