Trading in Stock ...

It's a study based on a simple algorithm based on moving average + RSI. This is the abstract: "Trend following (TF) is a rule-based trading mechanism that taps on the movements of long-term market trend instead of relying on any forecast or external information to decide when to buy and when to sell a stock. Its simple operation is in contrast to complicated prediction methods which typically would try to predict a future trend by analyzing the historical data and may be other factors.

Trend Following Algorithms for Technical Trading in Stock ...

The simplest trend following algorithm is the moving average crossover. It is based on the assumption that the daily distribution of returns can be modelled as a trend plus some Gaussian noise: = + An exponentially weighted moving average is typically used to pick up the trend term, while ignoring the noise.

(PDF) Trend Following Algorithms for Technical Trading in ...

Abstract. Trend following (TF) is trading philosophy by which buying/selling decisions are made solely according to the observed market trend. For many years, many manifestations of TF such as a software program called Turtle Trader, for example, emerged in the industry. Surprisingly little has been studied in academic research about its algorithms and applications.
